

**MANONMANIAM SUNDARANAR UNIVERSITY, TIRUNELVELI  
DEPARTMENT OF CHEMISTRY**

**M.Sc. CHEMISTRY Integrated program (CBCS) (3 + 2 = 5 years)**

**PROGRAM STRUCTURE & SYLLABUS  
EFFECT FROM JULY 2019**

### **1. Preamble**

M.Sc. Integrated program has 10 semesters system. In the first 6 semesters, the students will learn about the concept of organic, Inorganic and physical chemistry as equal to B.Sc. Program. After the successful completion of six semesters, students are allowed to continue in the next 4 semesters as equal to M.Sc. Program. The purpose of this integrated program is to acquire a basic appreciation and experience of chemistry. This program has the laboratory session along with theory that goes deals with the basics of chemical analysis and separation of components. The main aim of M.Sc. Integrated chemistry program is to equip the young students to continue their studies in Research and to get industrial and teaching positions in various institutions. The emerging Chemical Technologies are highly science based. A Chemist cannot isolate himself from other disciplines. The practice of Chemistry over a span of more than a century has created unavoidable impacts of human environment. The adverse effects were particularly noted during last few decades. The concept of sustainable development is now well accepted. The integrated program principles and applications of Chemistry should be learnt on this background.

### **2. Necessity**

The purpose of post-graduate education in Science is to create highly skilled manpower in specific areas, which will lead to generation of new knowledge and creation of wealth for the country. Chemistry is a fundamental science and has contributed immensely to the improvement of the life of human beings by providing many of human requirements and essentialities.

### **3. Importance**

Chemistry is an important subject to the world economy as well. The developments in Chemistry during last few decades are phenomenal. It is also seen that these developments are crossing the traditional vertical boundaries of scientific disciplines; the more inclination is seen towards biological sciences. New branches of chemistry are emerging and gaining importance, such as bioorganic chemistry, materials chemistry, computational

chemistry, etc. The practice of Chemistry at industrial scale also is undergoing radical changes and is more or more based on deep understanding the chemical phenomena.

#### 4. Outcome

After completing the M.Sc. program the students will be able to

- i. Pursue research program
- ii. Qualify as Chemist/Scientist in various industries and research institutions
- iii. Appear qualifying examination for teaching position.

#### 5. Objectives

- ★ To impart theoretical and practical skills that underpins the various branches of the science of Chemistry
- ★ To enable the students to have a thorough understanding and knowledge of different branches of Chemistry
- ★ To make the students to develop the ability to think analytically and solve problems.
- ★ To apply the skills and knowledge gained through the subject to real life situations and face competitive examinations with confidence.

#### 6. Eligibility for Admission

The minimum eligibility conditions for admission to the **M.Sc., INTEGRATED COURSE in Chemistry** program are given below.

The candidates for admission into the first semester of this course will be required to have qualified the Higher Secondary Examination with 60 % marks (5 % relaxation for SC, ST and physically challenged candidates) conducted by the Board of Higher Secondary Education, Government of Tamil Nadu in the following Science subject groups:

1. Mathematics, Physics, Chemistry + any other subject
2. Physics, Chemistry, Botany/Zoology + any other subject

or any other Examination as equivalent thereto in Science subject. In addition, the candidate has to qualify the Entrance test conducted for admission in to this course.

**Admission** will be based on (i) the total marks obtained in the entrance test (50%) and the qualifying Higher Secondary examination (Chemistry paper only 50%) and (ii) by following the govt. norms of reservation.

## 7. Duration of the Course

The students shall undergo the prescribed course of study for a period not less than **five** academic years (Ten semesters) consisting of 6 semesters (I – VI) for studying fundamentals of Chemistry (similar to Undergraduate Chemistry) and 4 semesters (VII – X) for studying advanced Chemistry (similar to Post-graduate Chemistry). Each semester contains 90 working days.

## 8. Program Structure (For I - VI Semesters)

Semester	Sub No.	Subject Status	Subject Title	T. Hrs/ Week	P Hrs./ Week	C Credits
I	1	Language	Tamil / other Language	4	-	4
	2	Language	English	4	-	4
	3	Core	Inorganic chemistry I	4	-	4
	4	Core	Organic Chemistry I	4	-	4
	5	Major Practical -I	Inorganic practical I	-	4	2
	6	Allied – I		3	-	3
	7	Allied Practical - I		-	4	2
	8	Common	Environmental Studies	2	-	2
<b>Subtotal</b>				<b>29</b>		<b>25</b>
II	9	Language	Tamil / other Language	4	-	4
	10	Language	English	4	-	4
	11	Core	Inorganic Chemistry II	4	-	4
	12	Core	Physical Chemistry I	4	-	4
	13	Major Practical -II	Inorganic practical II	-	4	2
	14	Allied – II		3	-	3
	15	Allied Practical - II		-	4	2
	16	Common	Value Based Education/Social Harmony	2	-	2
<b>Subtotal</b>				<b>29</b>		<b>25</b>
III	17	Language	Tamil / other Language	4	-	4
	18	Language	English	4	-	4
	19	Core	Physical Chemistry II	4	-	4
	38	Major Practical - III	Organic practical I	-	4	2
	20	Allied – III		3	-	3
	21	Allied Practical - III		-	4	2
	23	Non Major Elective	Food chemistry/Water manangement	3	-	3
	24	Common	Yoga	2	-	2
<b>Subtotal</b>				<b>28</b>		<b>24</b>
	25	Languae	Tamil / other Language	4	-	4
	26	Language	English	4	-	4

IV	27	Core	Organic Chemistry II	4	-	4
	38	Major Practical - IV	Organic Practical II	-	4	2
	28	Allied – IV		3	-	3
	29	Allied Practical - IV		-	4	2
	31	Non Major Elective	Applied Chemistry/Clinical Chemistry	3	-	3
	32	Common	Computer for Digital Era	2	-	2
	33	Extension Activity	NCC, NSS, YRC, YWF	2	-	1
<b>Subtotal</b>				<b>30</b>		<b>25</b>
V	34	Core	Inorganic III	4	-	4
	35	Core	Physical III	4	-	4
	35	Core	Organic III	4	-	4
	22	Skill Based Core - I	Food Chemistry/Agro Chemistry	4	-	4
	36	Elective – I	Polymer/Industrial Chemistry	3	-	3
	37	Elective –II	Analytical/Pharmaceutical Chemistry	3	-	3
	47	Major Practical - V	Physical practical I	-	4	2
	41	Skill Based Common	Personality Development/Effective Communication/Youth Leadership	2	-	2
<b>Subtotal</b>				<b>28</b>		<b>26</b>
VI	43	Core	Inorganic IV	4	-	4
	44	Core	Physical IV	4	-	4
	45	Core	Organic IV	4	-	4
	46	Elective – III	Biochemistry/Applied Chemistry	3	-	3
	30	Skill Based Core - II	Chromatography/ Dairy Chemistry	4	-	4
	47	Major Practical - VI	Physical Practical II	-	4	2
	49	Mini Project		-	6	3
<b>Subtotal</b>				<b>29</b>		<b>24</b>
<b>Grant Total</b>				<b>173</b>		<b>149</b>

**For Semesters VII to X, the Structure of Program and syllabus shall be the one followed for TWO YEAR M.Sc Chemistry program CBCS offered in Department of Chemistry.**

### 9. Internal Assessment

Distribution of marks between External and Internal Assessment is

- ★ For Theory 75 : 25
- ★ For Practical 50 :50

**Pass minimum of 50%** for external and overall components.

**Internal Marks for Theory** shall be allotted in the following

The average of the best two from three compulsory tests.	15 Marks
Assignment	05 Marks
Seminar	05 Marks
<b>TOTAL</b>	<b>25 Marks</b>

**Internal Marks for Practical** shall be allotted in the following manner

Lab performance	25 Marks
Internal Test (Average of two test)	25 Marks
<b>TOTAL</b>	<b>50 Marks</b>

## 10. Question Pattern

### Scheme of Examination and question pattern

Time: 3 hours

Max. marks:75

Part A : 10 questions full of Objective type WITHOUT multiple choice. Two questions from each unit of a paper. Each question carries one marks.  $10 \times 1 = 10$  marks

Part B : 5 descriptive questions, of either a or b type (internal choice). One question is from Each unit. Each question carries 5 marks  $5 \times 5 = 25$  marks

Part C : 5 descriptive type questions of either a or b type (internal type). One question is from Each unit. Each question carries 8 marks.  $5 \times 8 = 40$  marks

**Course Weight:** In each of the courses, credits will be assigned on the basis of the lectures / tutorials / lab work and other forms of learning in a 15 week schedule.

1. One credit for each lecture hr. per week
2. One credit for each tutorial hr. per week
3. One credit for every two hrs. of Lab or Practical Work per week

**SEMESTER I**  
**INORGANIC CHEMISTRY PAPER – I**

L (hrs)	Credits
60	4

**Objectives**

- To study the atomic structure from wave mechanical concept
- To know the arrangement of elements in the periodic table and the periodic properties.
- To understand the different kinds of chemical forces in molecules.
- To know the nature of compounds formed by s- and p-block elements.

**Unit I –Atomic structure (12hrs.)**

Dual nature of matter – de Broglie equation (verification not required) - Schrodinger wave equation and its applications (no derivation)- Eigen value and eigen function-significance of  $\Psi$  and  $\Psi^2$  –quantum numbers and their significance-principles governing the occupancy of electrons in various quantum levels-Pauli's exclusion principle-Hund's rule, Aufbau principle- probability distribution of electron around the nucleus –radial probability distribution

**Unit II – Periodic properties (10hrs.)**

Long form of periodic table- classification as s, p, d and f block elements -periodicity in properties- variation of atomic and ionic radii, electron affinity, ionization energy and electronegativity along periods and groups – various scales of electronegativity – Pauling, Mullikan and Allred Rochow's scale of electronegativity – factors affecting the magnitude of electronegativity – applications of electronegativity

**Unit III – Chemical bonding-I (14 hrs)**

Properties of ionic compounds- Lattice energy- definition- Born-Lande equation (derivation not required), factors affecting lattice energy, Born-Haber cycle-enthalpy of formation of ionic compound and stability. Covalent character in ionic compounds- polarization and Fajan's rule.

**Unit IV –Chemical bonding-II (10hrs.)**

Valence bond theory – hybridization of atomic orbitals and geometry of molecules – sp, sp<sup>2</sup>, sp<sup>3</sup>, sp<sup>3</sup>d and sp<sup>3</sup>d<sup>2</sup> hybridization with examples. VSEPR theory- shapes of simple inorganic molecules – MO theory- applications of MOT to O<sub>2</sub>, F<sub>2</sub>, HF and CO- comparison of VBT and MOT.

**Unit V –S-block elements (14hrs.)**

Hydride (classification, general methods of preparation and salient features), hydration energies, solvation and complexation tendencies of alkali and alkaline-earth metals- Chemistry of Li and Be, their anomalous behavior and diagonal relationship - alkyls and aryls- roles of Li and Be in biology.

**Reference Books**

5. F. A. Cotton, G. Wilkinson, C. Murillo and M. Bochman, *Advanced Inorganic Chemistry*, Wiley India, 6<sup>th</sup> edition, 2008.

**SEMESTER I**  
**ORGANIC CHEMISTRY PAPER – I**

L (hrs)	Credits
60	4

**Objectives**

- To study about polar effects and reaction intermediates
- To learn the mechanism of substitution and elimination reactions.
- To study the conformations of hydrocarbons.
- To learn the chemistry of halide and oxygen based functional organic compounds.
- To learn the preparation and uses of organometallic compounds.

**Unit I-Principles of reactions**

(12hrs.)

Polar effects-inductive, resonance and steric effects and their influence on acidity and basicity of organic compounds –  $p\pi-d\pi$  bonds, Heterolytic and homolytic cleavage, nucleophiles and electrophiles-reaction intermediates – preparation, properties and structures of carbonium ions, carbanions and free radicals -type of reactions - substitution, addition, elimination and polymerisation reactions.

**Unit II- Hydrocarbons**

(12hrs.)

Classification of alkadienes, stability of conjugate dienes- Mechanism of 1,2 and 1,4-addition- Diels-Alder reaction. Acidity of alkynes and formation of metal acetylides.

Addition to unsymmetrical olefins (Markownikoff's rule and peroxide effect), hydroboration, ozonolysis, dihydroxylation with  $KMnO_4$ ,  $OsO_4$  & allylic bromination by NBS (mechanisms not required) Brominating reagents –  $Br_2$ ,  $NaBrO_3$ .

**Unit III – Halogen derivatives**

(12hrs.)

$S_N1$  and  $S_N2$  mechanisms -  $E_1$  and  $E_2$  mechanisms- Hoffmann's and Saytzeff's rule-preparation, properties and uses of chloroform, carbon tetrachloride, vinyl chloride and allyl chloride- preparation and uses of westron, westrosol, freon and chloroprene.

**Unit IV-Alcohols and ethers**

(12hrs.)

Distinction between primary, secondary and tertiary alcohols – nitroglycerol, dynamite- estimation of hydroxyl groups- mechanism of dehydration of alcohols- preparation and properties of allyl and crotyl alcohol.

Preparation and uses of oxirane and dioxan –Estimation of number of methoxy groups-Zeisel's method. Distinction between ethers and alcohols.

**Unit V-Organometallic compounds and organosulphur compounds**

(12hrs.)

Preparation, structure and synthetic uses of Grignard reagent-preparation and reactions of methyl lithium, diethyl zinc, tetraethyl lead and tetramethyltin-Reformatsky reaction - Preparation and properties of thioalcohols and thioethers – sulphonal-mustard gas and sulphones.

## SEMESTER I

### INORGANIC PRACTICAL - I Volumetric Analysis

L (hrs)	Credits
60	2

#### Objective

To enable the students to acquire the quantitative skills in volumetric analysis and qualitative inorganic salt analysis.

#### Acidimetry and alkalimetry

1. Estimation of oxalic acid – Std. oxalic acid
2. Estimation of  $\text{Na}_2\text{CO}_3$  – Std.  $\text{Na}_2\text{CO}_3$

#### Permanganometry

3. Estimation of sodium oxalate – Std. oxalic acid
4. Estimation of ferrous ammonium sulphate – Std. ferrous ammonium sulphate

#### Iodometry

5. Estimation of copper – Std. copper sulphate

#### Dichrometry

6. Estimation of ferrous iron – Std. ferrous ammonium sulphate
7. Estimation of  $\text{K}_2\text{Cr}_2\text{O}_7$  – Std  $\text{K}_2\text{Cr}_2\text{O}_7$

#### Complexometry

8. Estimation of Zn – Std  $\text{ZnSO}_4$
9. Estimation of Pb – Std  $\text{ZnSO}_4$
10. Estimation of Mg – Std  $\text{ZnSO}_4$
11. Estimation of Cu – Std  $\text{ZnSO}_4$
12. Estimation of Ni – Std  $\text{ZnSO}_4$
13. Total hardness of water

#### Semi micro qualitative analysis of inorganic salt mixtures containing two acid radicals (one should be an interfering radical) and two basic radicals

##### 1. Anions:

Simple anions:

Carbonate, nitrate, sulphate, chloride and bromide.

Interfering anions:

Borate, fluoride, oxalate, phosphate and chromate.

##### 2. Cations:

Group I : Lead

Group II : copper, cadmium, bismuth, antimony.

Group III : Aluminium, ferrous iron

Group IV : Cobalt, nickel, manganese, zinc.

Group V : Barium, strontium, calcium

Group VI : Magnesium, ammonium.

Internal – 40 marks

10 marks - regularity

20 marks – average of best ten estimations in regular class work

10 marks –average of two model exams

External -60 marks

10 marks – record (atleast 10 volumetric estimations)

10 marks – procedure

40 marks – result

**SEMESTER II**  
**INORGANIC CHEMISTRY- II**

L (hrs)	Credits
<b>60</b>	<b>4</b>

**Objectives**

- To know the basic principles of metallurgy and the chemistry of d- Block elements
- To learn the chemistry of f- Block elements
- To learn the acid base concepts and the reactions in Non-aqueous solvents
- To understand the basic concepts of coordination chemistry and early theory
- To learn the basic analytical methods

**Unit-I p-block elements**

**(12hrs.)**

Comparative study (group-wise) of group 13 & 14 elements with respect to periodic properties. Compounds such as hydrides, halides, oxides and oxyacids- diagonal relationship- preparation, properties, bonding and structure of diborane, borazine and alkali metal borohydrides. Preparation, properties and technical applications of carbides and fluorocarbons. Silicones and structure of silicates.

**Unit II- Metallurgy**

**(12hrs.)**

Occurrence of metals – concentration of ores – froth floatation, magnetic separation, calcinations, roasting and smelting. Purification of metals – electrolysis, zone refining, van Arkel de Boer methods.

**Unit III- d-Block elements**

**(12hrs.)**

General characteristics of d- Block elements – Group study of Titanium, Iron, Coinage and Zinc group metals. Important compounds of transition metals: Ziegler – Natta catalyst. Prussian blue, Sodium nitroprusside, Turnbull's blue, Nickel DMG complex, Wilkinson's Catalyst-  $\text{KMnO}_4$  and  $\text{K}_2\text{Cr}_2\text{O}_7$ .

**UNIT IV-Coordination Chemistry-I**

**(12hrs.)**

Introduction: ligands- monodentate, bidentate, and polydentate ligands; coordination sphere; Coordination number; nomenclature of mononuclear and dinuclear complexes. Structural and stereoisomerism in tetrahedral, square planar and octahedral complexes.

Valence Bond theory – applications of valence bond theory to tetrahedral, square planar and octahedral complexes- Merits and limitations of VB theory

**Unit V: Acids, Bases and Non-aqueous solvents**

**(12hrs.)**

Acids and Bases: Arrhenius theory, acids and bases in protic solvents, Bronsted-Lowry theory, Lewis theory, the solvent system, Lux-Flood definition, Usanovich definition; hard and soft acids and bases-HSAB principle.

Non-aqueous solvents: physical properties of a solvent, types of solvents and their general characteristics. Reactions in non - aqueous solvents with reference to liq.  $\text{NH}_3$  and liq  $\text{SO}_2$ - Comparison.

**SEMESTER II  
PHYSICAL CHEMISTRY-I**

L (hrs)	Credits
60	4

**Objectives**

- To study the behavior of molecules in gaseous states
- To learn the various properties of crystalline solids
- To understand the various phenomena on the surface of solids
- To study the nuclear stability and nuclear reactions
- To understand the basic concepts and first law of thermodynamics

**Unit - I Gaseous state**

**(12hrs.)**

Types of molecular velocities and their inter relations - mean, rms, most probable velocities - Calculation of most probable velocity, average velocity and root mean square velocity Maxwell's distribution of molecular velocities, statement of equation and explanation (no derivation) – graphic representation - effect of temperature on velocity distribution. Collision diameter - collision number - collision frequency - mean free path – Degrees of freedom of gaseous molecules - principle of equipartition of energy - heat capacity and molecular basis. Viscosity of gases and effect of temperature and pressure on coefficient of viscosity

**Unit - II Solid state**

**(12hrs.)**

Difference between crystalline and amorphous solids - isotropy and anisotropy - crystal lattices - laws of crystallography - elements of symmetry of crystals - crystal systems - unit cell - space lattice - Bravais lattices - Miller indices - cubic and hexagonal packing – radius ratio rule – tetrahedral and octahedral voids

Bragg's equation, derivation and applications - determination of structure of crystals by X-ray diffraction methods - rotating crystal and powder method, structure of NaCl, KCl and ZnS. Imperfections in a crystal - Schottky defects, Frenkel defects, Nonstoichiometric defects - use of crystallographic data for the determination of Avogadro number and molecular mass

**Unit - III Surface chemistry**

**(12hrs.)**

Adsorption - physisorption and chemisorptions - adsorption of gases by solids - adsorption isotherms - Freundlich adsorption isotherm - derivation of Langmuir adsorption isotherm, statement and explanation of BET isotherm - applications of adsorption - determination of surface area – adsorption indicators.

General characteristics of catalytic reactions – phase transfer catalysis - acid base catalysis - enzyme catalysis - mechanism and kinetics of enzyme catalyzed reactions – Michaelis-Menten equation

**Unit - IV Nuclear chemistry**

**(12hrs.)**

Natural radioactivity - detection and measurement of radioactivity – Geiger Nuttal rule - rate of disintegration and half life period - average life period - nuclear stability, n/p ratio, magic number, mass defect and binding energy - liquid drop model - shell model - isotopes, isobars, isotones and isomers. Artificial radioactivity - nuclear fission and nuclear fusion – mechanisms – applications - differences – Stellar energy - nuclear reactors - hazards

of radiations - fertile and fissile isotopes. Applications of radioisotopes –  $C^{14}$  dating, rock dating, neutron activation analysis and isotope as tracers - study of reaction mechanism

### **Unit – V Chemical kinetics**

**(12 hrs.)**

Rate of reaction-Measuring rates of reaction-expressing reaction rates- factors influencing rate-rate constant-Rate laws, Stoichiometry, order and molecularity of reactions-Setting up and solving simple differential equation for first order, second order, third order and zero order reactions. Experimental techniques involved in following kinetics of reaction-Volumetry, manometry and colorimetry. Effect of temperature on rate constant. The activation energy - determination of Arrhenius frequency factor and energy of activation-The collision theory of reaction rates and its limitation. Lindemann theory of unimolecular reactions-The theory of Absolute reaction rates.Comparison of the collision theory with the Absolute reaction rate theory.

**SEMESTER II**  
**INORGANIC PRACTICAL - II**  
**Inorganic Qualitative Analysis**

L (hrs)	Credits
60	2

**Objective**

To enable the students to understand various inorganic salt preparation and their quantitative estimation.

**Gravimetric Estimation**

1. Estimation of lead as lead chromate
2. Estimation of barium as barium chromate
3. Estimation of nickel as nickel dimethylglyoximate
4. Estimation of zinc as zinc oxinate
5. Estimation of copper as copper thiocyanate

**Inorganic preparations**

1. Preparation of Potash alum
2. Preparation of Chrome alum
3. Preparation of Prussian blue
4. Preparation of Sodium ferrioxalate
5. Preparation of Tetramminecopper(II) sulphate
6. Preparation of Tristhiourea copper(I)chloridedihydrate
7. Preparation of Potassium trisoxalatoferrate(III)
8. Preparation of Hexathiourealead(II) nitrate

**SEMESTER III  
PHYSICAL CHEMISTRY II**

L (hrs)	Credits
<b>60</b>	<b>4</b>

**Objectives**

- To study about the thermo chemistry
- To understand the concept of chemical equilibrium
- To learn about the chemistry of solutions

**UNIT- I Chemical equilibrium**

**(12hrs.)**

Reversible and irreversible reactions-nature of chemical equilibrium-Law of mass action-equilibrium constants-  $K_p$ ,  $K_c$  and  $K_x$  Thermodynamic derivations -Relations between  $K_p$ ,  $K_c$  and  $K_x$ - Temperature dependence of equilibrium constant- Van't Hoff isochore-Pressure dependence of equilibrium constant- Heterogenous equilibrium-Le-Chatelier principle-application of Le-Chatelier principle to homogenous equilibrium and physical equilibrium.

**UNIT - II Solutions**

**(12hrs.)**

Kinds of solutions - methods for expressing concentration - Molarity, molality, mole fraction, normality, mass fraction, parts per million -solutions of gases in liquid -Solubility of gases in liquids - Henry's law – statement and limitations.

Solutions of liquid in liquid– Binary liquid mixture - Ideal and non ideal solutions - Raoult's law. - deviation from ideal behavior - pressure - composition and temperature - Composition diagrams for completely miscible binary solutions - Fractional distillation - Azeotropic distillation - nature of azeotropic mixtures - partially miscible liquids - consolute temperature- critical solution temperature-system with upper CST, lower CST and upper and lower CST - Crismer test - Completely immiscible systems-steam distillation.

**UNIT - III Dilute solutions**

**(12hrs.)**

Colligative properties of dilute solutions: relative lowering of vapour pressure, elevation of boiling point, depression of freezing point and osmotic pressure, Ebullioscopic constant-Cryoscopic constant- Relation between colligative properties and Molecular mass – Osmosis-osmotic pressure-.laws of osmotic pressure -osmotic pressure and concentration of solute- Experimental methods for determining various colligative properties, degree of dissociation and association of solutes Abnormal molecular mass – Van't Hoff factor.

**UNIT – IV Ionic equilibria**

**(12 hrs.)**

The Ostwald's dilution law-experimental verification – limitations-acids and bases-Lewis concept-dissociation of weak acids and weak bases-dissociation of water-pH scale-common ion effect- its applications-buffer solution-different types-calculation of pH value of buffer solution. Hydrolysis of salts - salts of weak acids & strong base, salts of weak base and strong acids, salts of weak acid and weak base - determination of degree of hydrolysis. Acid-base indicators- acid-base titration and use of indicators.Solubility product-Application of solubility product principle.

## UNIT-V Phase equilibria

(12 hrs.)

Phase rule - phase, component, degree of freedom - thermodynamic derivation of phase rule, One-component system: Phase diagrams of Water and sulphur systems.

Two component system: (i) Simple eutectic: Lead-silver system and potassium iodide-water system. (ii) Formation of compound with congruent melting point: Magnesium-zinc system and ferric chloride - water system. Distribution Law-Statement and thermodynamic derivation-association of the solute in one of the solvents- dissociation of the solute in one of the solvents-applications of the distribution law-solvent extraction.

**SEMESTER III  
NON-MAJOR ELECTIVE  
FOOD CHEMISTRY**

L (hrs)	Credits
45	3

**Objectives:**

To acquire the basic knowledge of food chemistry

**Unit – I Introduction (9 hrs.)**

Food : sources and classification – food as a source of energy - functions and biological importance of carbohydrates, protein, fat, vitamins and minerals - calorific value of food – energy requirements of individuals - balanced diet.

**Unit - II Food additives (9 hrs.)**

Definition, food colourants : natural and artificial - antioxidants, stabilizers, flavours, bleaching and maturing agents – leavening agents.

**Unit - III Food preservatives (9 hrs.)**

Definition - classification - methods of food preservation and processing by heat, cold, radiation, drying and deep freezing.

**Unit - IV Food adulteration (9 hrs.)**

Definition – types – detection and analysis of adulterants in foods: milk, chilli powder, coffee powder, turmeric powder, ghee, oil and pulses.

**Unit -V Quality standards (9 hrs.)**

Quality control - specification and standards - FA, WHO standards – packing and labeling of foods, Essential Commodities Act - Consumer Protection Act - AGMARK.

**Books for Reference:**

1. Sivasankar B, Food Processing and Preservation, Prentice Hall of India Pvt. Ltd, New Delhi, 2002.
2. Swaminathan M. Textbook on Food Chemistry, Printing and Publishing Co, Ltd, Bangalore 1993.
3. Food Science – III Edition – Sri Lakshmi B, New Age International Publisher, 2005.
4. Fundamentals of Foods and Nutrition – Mudambi. R. Sumathi, and Rajagopal, M.V. - Willey Eastern Ltd, Madras, 1982.

**SEMESTER III  
NON-MAJOR ELECTIVE  
WATER MANAGEMENT**

<b>L (hrs)</b>	<b>Credits</b>
<b>45</b>	<b>3</b>

**Objectives:**

To realize the importance of quality water in day to day life

**Unit I Water pollution (9 hrs.)**

Definition-sources of water pollution-types of water pollutants: sewage and domestic wastes, industrial effluents, agricultural discharges, detergents, disease causing agents and radioactive materials. Eutrophication and its effects.

**Unit II Water quality parameters (9 hrs.)**

Physical, chemical and biological water quality parameters-water quality standards for drinking water - BIS and WHO. Determination of pH, Total hardness, DO, BOD and COD.

**Unit III Water purification (9 hrs.)**

Purification of water for drinking purposes: Sedimentation, filtration and disinfection-Desalination: reverse osmosis-Purification of water for industrial purposes: water softening-permutit process and ion-exchange process.

**Unit IV Waste water treatment (9 hrs.)**

Elementary ideas of waste water treatment: pre-treatment-primary treatment-secondary treatment: aerobic and anaerobic processes - tertiary treatment: evaporation adsorption - chemical precipitation.

**Unit V Restoration and management (9 hrs.)**

Importance of lakes and rivers-stresses on the Indian rivers and their effects - A restoration case study: Ganga Action Plan: objectives implementation and drawbacks. Rain water harvesting - Nwater recycling- The water Prevention and control of Pollution Act 1974.

**SEMESTER III**  
**ORGANIC PRACTICAL - I**  
**ORGANIC ANALYSIS**

L (hrs)	Credits
<b>60</b>	<b>2</b>

**Objective**

To analyze and identify the organic compounds

**Organic analysis**

Qualitative analysis of the given organic compound

- a. Test for aliphatic and aromatic nature of substances
- b. Test for saturation and unsaturation
- c. Identification of functional groups (carboxylic acids, phenols, aldehydes, ketones, esters, amines, amides, anilides, nitrocompounds and carbohydrates)
- d. Preparation of solid derivative to confirm the presence of functional group

**References**

**SEMESTER IV  
ORGANIC CHEMISTRY - II**

L (hrs)	Credits
60	4

**Objectives**

- To study about aldehydes and ketones
- To understand the reactivity of carboxylic acids & acid derivatives
- To learn about the aliphatic nitrogen compounds
- To study about the reactivity of methylene compounds & tautomerism
- To know about alicyclic compounds and its properties

**Unit-1 Aldehydes and ketones**

**(12 hrs.)**

Structure and reactivity of carbonyl group – relative reactivities of aldehydes and ketones – mechanism of nucleophilic addition reaction (HCN, NaHSO<sub>3</sub>, Grignard reagent) – mechanism of aldol condensation, crossed aldol condensation, Knoevenagel reaction, Reformatsky reaction.

Study of the following reactions – Wolff-Kishner reduction, Wittig reaction, Meerwein-Ponndorf-Verley reduction.

Preparation, properties and uses of chloral, acrolein, crotonaldehyde and succinaldehyde.

**Unit-II Carboxylic acids & acid derivatives**

**(12 hrs.)**

Structure of carboxylic acid and carboxylate anion - relative strengths of monocarboxylic acids - effect of substituents on acidity - Hell - Volhard - Zelinsky reaction - action of heat on hydroxy acids - preparation, properties and uses of lactic acid and citric acid - dicarboxylic acids: action of heat on dicarboxylic acids - preparation, properties and uses of oxalic acid and succinic acid. Acid anhydrides - Amides - Preparation, properties and structure of urea - Esters- mechanism of esterification and ester hydrolysis.

**Unit – III Aliphatic nitrogen compounds**

**(12 hrs.)**

General methods of preparation of primary, secondary and tertiary amines - General Properties - Isomerism - Stereochemistry - basic character of amines - Distinction between primary, Secondary and tertiary amines. Preparation and properties of quaternary ammonium compounds. Preparation and reactions of diazo methane and diazoacetic ester

**Unit –IV Reactive methylene compounds & tautomerism**

**(12 hrs.)**

Reactivity of methylene groups - preparation and synthetic uses of diethyl malonate, ethyl acetoacetate and ethyl cyanoacetate.

Tautomerism - definition - various types, keto - enol, amido - imido, nitro - acinitro and oxime - nitroso tautomerism.

**Unit - V Alicyclic compounds**

**(12 hrs.)**

Nomenclature - general methods of preparation - spectroscopic properties – chemical properties - relative stabilities of cyclo alkanes - Baeyer's strain theory – Sachse-Mohr theory - Coulson and Moffit's concept - conformations of cyclohexane and monosubstituted cyclohexanes - largering compounds - synthesis and structure of civetone and muscone (structure elucidation not necessary).

**SEMESTER IV  
NON-MAJOR ELECTIVE  
APPLIED CHEMISTRY**

<b>L (hrs)</b>	<b>Credits</b>
<b>45</b>	<b>3</b>

**Objectives:**

To acquire knowledge about the chemicals used in day to day life

**Unit I Soaps and detergents**

**(9 hrs.)**

Soaps: Definition-classification-raw materials used in the manufacture of soap – manufacture of toilet soap.

Detergents: Definition –various types with examples- advantages of detergents over soaps –cleansing action of soap.

**Unit II Fertilizers**

**(9 hrs.)**

Definition-characteristics of a good fertilizer- role of nitrogen, potassium and phosphorous in plant growth – natural fertilizers- chemical fertilizers: urea, muriate of potash and triple superphosphate - mixed fertilizers - biofertilizers – advantages of biofertilizers.

**Unit III Polymers**

**(9 hrs.)**

Fibers: Classification - uses of terylene, nylon and orlon.

Resins: Natural resins - synthetic resins-type-uses of fevicol, quick fix, araldite, glyptal and Bakelite.

Plastics: classification- differences between thermoplasts and thermosets. Advantages of plastics-uses of polythene, PVC, polystyrene, Teflon and thermocole.

Rubber: Types-defects in natural rubber-vulcanization - synthetic rubbers- uses of neoprene, thiocol, butyl rubber, silicone rubber and foam rubber.

**Unit IV Chemicals in pharmacy**

**(9 hrs.)**

Definition and therapeutic uses of the following (an elementary study only)

Antiseptics: alum, boric acid

Mouth washes: Hydrogen peroxide

Antacids: Aluminium hydroxide

Analgesics: Aspirin, paracetamol

Antibiotics: Penicillins, tetracyclines

Haematinics: Ferrous fumarate, ferrous gluconate

Laxatives: Epsom salt, milk of magnesia

Sedatives: Diazepam

**Unit V Chemicals in day-to-day life**

**(9 hrs.)**

An outline of the preparation and uses of the following articles. Tooth powder, tooth paste, writing inks, gum paste, boot polish, talcum powder, chalk crayons, agar battis, phenyl and moth balls.

**Books for reference:**

1. B. K. Sharma, Industrial Chemistry, Goel Publishing House, Meerut, 2000.
2. Jeyashree Gosh, A text book of Pharmaceutical Chemistry, S. Chand and Company, NewDelhi, 2014.
3. B. N. Chakrabarty, Industrial Chemistry, Oxford and IBH Publishing Co. Pvt. Ltd., Calcutta, 2005.

**SEMESTER IV  
NON-MAJOR ELEC  
CLINICAL CHEMISTRY**

<b>L (hrs)</b>	<b>Credits</b>
<b>45</b>	<b>3</b>

**Objectives**

- To know about the safety in laboratory
- To know basic first aids
- To acquire skill in biochemical analysis

**Unit I**

**(9 hrs.)**

Safety in laboratory-importance-safety equipments-personal protection-dangers to avoid-chemical hazards-corrosive, irritants, toxic, flammability and explosive hazards Physical hazards - fire, pressure and radiation Biological hazards-micro organisms and animal body fluids Spillage and waste disposal.

**Unit II**

**(9 hrs.)**

First aids for accidents-important rules of first aid, First aid for cuts and abrasions, First aid for bleeding and fractures, First aid for burns, fainting and poisonous bites, First aid box.

**Unit III**

**(9 hrs.)**

Blood: Definition-functions and composition-collection of blood through vein puncture and finger prick-Haemolysis agents-precautions. Anti coagulants - definition, types and quantity used for tests. Haemotopoiesis -erythropoiesis, leucopoiesis and thrombopoiesis.

**Unit IV**

**(9 hrs.)**

Blood hemoglobin-methods and procedure for hemoglobin test.  
Total RBC count-RBC indices-reticulocyte count-normal values-increased and decreased conditions.

Classification of leucocytes-functions-total WBC count-morphology types of WBC-total eosnophil count-normal values- increased and decreased conditions.  
Functions of platelet - total platelet count-normal values- increased and decreased conditions.

**Unit V**

**(9 hrs.)**

Blood group system-blood groups-importance, types, antigen and agglutination antigen-antibodies in different groups. Blood transfusion: detailed blood donor screening procedure-blood collection-anticoagulants in blood bank-storage of donor blood.  
Procedures for estimating blood glucose and blood urea.

**Books for reference:**

4. Medical Lab Technology – RamnikSood, JPB, 1999.
5. Practical Clinical Biochemistry – W. H. Heinemann, Verley Publications, 1969.

**SEMESTER IV**  
**ORGANIC PRACTICAL - II**  
**ORGANIC PREPARATION & DETERMINATION OF PHYSICAL CONSTANTS**

L (hrs)	Credits
<b>60</b>	<b>2</b>

**Objectives**

- To provide training on organic preparation
- To provide experimental skill and training to determination of boiling point/ melting point

**1. Organic preparation**

1. Preparation of salicylic acid from methyl salicylate/ benzoic acid from ethylbenzoate
2. Preparation of benzoic acid from benzamide
3. Preparation of acetyl salicylic acid from salicylic acid/ acetanilide from aniline
4. Preparation of benzoic acid from benzaldehyde
5. Preparation of p-bromoacetanilide from acetanilide
6. Preparation of 2-naphthyl benzoate from 2-naphthol
7. Preparation of picric acid from phenol
8. Preparation of methyl orange from sulphanilic acid

**2. Determination of boiling point/ melting point of the given organic compound**

**References**

5. P.R.Singh, D.C.Gupta, K.S.Bajpal Experimental Organic Chemistry Vol.I and II, 1980.

**SEMESTER – V**  
**INORGANIC CHEMISTRY - PAPER III**

<b>L (hrs)</b>	<b>Credits</b>
<b>60</b>	<b>4</b>

**Objectives**

- To study the chemistry of noble gases
- To study the theories in coordination chemistry
- To study the chemistry of metal carbonyls
- To understand the role of metal ions in biological systems
- To study the basic principles of photoinorganic chemistry

**UNIT - I : Chemistry of f- Block elements**

**(12 hrs.)**

General characteristics of f-block elements – comparative account of lanthanides and actinides – occurrence, oxidation states, magnetic properties, colour and spectra – separation by ion exchange and solvent extraction methods – lanthanide contraction – chemistry of thorium and uranium – occurrence, ores, extraction and uses – preparation, properties and uses of ceric ammonium sulphate, thorium dioxide, thorium nitrate, uranium hexafluoride, uranylacetate

**UNIT - II: Noble gases**

**(12 hrs.)**

Occurrence - isolation of noble gases from the atmosphere - separation of the gases from one another - general physical properties - special properties of helium - isotopes of helium - uses of noble gases - importance of inert gases in theoretical chemistry - chemical properties - xenon chemistry: preparation and properties of fluorides, oxides and oxofluorides of xenon - xenates and perxenates - xenon fluoride complexes - structure and bonding in xenon compounds. Fluorides of krypton and radon - hydrates and clathrates of noble gases - uses of clathrate compounds

**UNIT - III: Co-ordination chemistry II**

**(12 hrs.)**

Crystal field theory - splitting of d-orbitals in octahedral and tetrahedral complexes - factors affecting the magnitude of crystal field splitting - effects of crystal field splitting - spectrochemical series - applications of CFT - magnetic properties and spectra of transition metal complexes - crystal field stabilization energy and their uses - limitations of CFT - effective atomic number rule - stability of complexes - step-wise and overall stability constants - factors affecting the stability of complexes - determination of stability constants.

**UNIT - IV: Co-ordination chemistry III**

**(12 hrs.)**

Labile and inert complexes - ligand substitution reactions in octahedral complexes: aquation, base hydrolysis and anation reactions - substitution reactions in square planar complexes - trans effect - theories of trans effect - mechanism of substitution reactions - redox reactions : inner-sphere and outer-sphere electron transfer reactions - metal carbonyls : 18 electron rule as applied to metal carbonyls - preparation, properties and structure of mono,

di and polynuclear carbonyls of Cr, Mn, Fe, Co and Ni - nature of M-L bond in metal carbonyls - metal nitrosyls.

#### **UNIT - V :Bioinorganic chemistry**

**(12 hrs.)**

Role of alkali and alkaline earth metals in biological systems and their transport across the membranes - the effect of excess and deficiency of essential trace metals (Cu, Fe, Co and Zn) - metalloporphyrins - myoglobin and hemoglobin - dioxygen binding - cooperativity in hemoglobin - the Bohr effect - chlorophyll - vitamin B<sub>12</sub>. Metal complexes of copper, gold and platinum as therapeutic agents - chelation therapy in metal poisoning.

**SEMESTER V**  
**PHYSICAL CHEMISTRY – III**

L (hrs)	Credits
60	4

**Objectives**

- To understand the kinetics of reactions
- To understand the concepts of thermodynamics
- To study the principles of electrochemistry and the types of electrochemical cells
- To know the terms in phase rule and its application to various systems

**UNIT - I Thermodynamics-I**

**(12hrs.)**

Basic concepts - system, surroundings - types of systems - extensive and intensive properties - state functions and path functions - types of processes - . Exact and inexact differentials -Zeroth law of thermodynamics. Statements of first law - definition of internal energy and enthalpy - heat capacities at constant volume ( $C_v$ ) and at constant pressure ( $C_p$ ), relationship between  $C_p$  and  $C_v$  - calculation of work, heat, internal energy change and enthalpy change for the expansion of an ideal gas under reversible isothermal and adiabatic conditions. Joule-Thomson effect – Joule-Thomson coefficient and its significance - derivation of the expression for Joule-Thomson coefficient - inversion temperature. Kirchoff's equation and its applications - numerical problems.

**UNIT -II Thermodynamics-II**

**(12hrs.)**

Introduction to second law of thermodynamics - spontaneous processes - statement of second law of thermodynamics.

Entropy: Definition –entropy a state function - Trouton's rule -entropy change in reversible and irreversible processes- Clausius inequality- entropy as function of T and V - entropy as a function of T and P - entropy change in isothermal transformation - entropy change accompanying change of phase - entropy of mixing of ideal gases - physical significance of entropy.

Free energy: Work and free energy functions – definition-general conditions of equilibrium and spontaneity -physical significance of  $dA$  and  $dG$ . Temperature and pressure dependence of G - variation of G during isothermal change -Gibbs Helmholtz equation.

**UNIT-III Thermodynamics-III**

**(12hrs.)**

Van't Hoff isotherm and isochore - Clapeyron equation-Clapeyron-Clausius equation-Applications of Clapeyron-Clausius equation.

Third law of thermodynamics: Nernst heat theorem- statement of III law and its applications. Exception to third law- experimental verification of the law-residual entropy-Evaluation of absolute entropy from heat capacity measurements.

Partial molar properties: Partial molar free energy. The concept of chemical potential - variation of chemical potential with T and P- Gibbs Duhem equation- concept of fugacity and activity- activity coefficient - standard states.

**UNIT - IV Electrochemistry- I**

**(12 hrs.)**

Metallic and electrolytic conductance - Definitions of specific, equivalent and molar conductances - Relations between them - measurement of conductance and cell

constant. Variation of conductance with dilution - Qualitative explanation - Strong and weak electrolytes. Migration of ions - transport number - determination by Hittorf and moving boundary methods - Kohlrausch's law - applications - calculation of equivalent conductance for weak electrolytes and determination of transport number. Ionic mobilities and Ionic conductances. Diffusion and ionic mobility- molar ionic conductance and viscosity- Walden rule-Applications of conductance measurements - Degree of dissociation of weak electrolytes - Determination of Ionic product of water - Determination of solubility of sparingly soluble salts - conductometric titrations.

#### **UNIT – V Electrochemistry –II**

**(12 hrs.)**

Galvanic cells - Reversible and Irreversible cells - EMF and its measurement - Weston Standard cell - types of reversible single electrodes - standard Hydrogen electrode - calomel electrode - Derivation of Nernst equation both for emf of cells and single electrode potentials–significance.Application of emf measurements – Application of Gibbs - Helmholtz equation to galvanic cells - calculation of thermodynamic quantities - pH using hydrogen, quinhydrone and glass electrodes - potentiometric titrations. Concentration cells - electrode concentration cells- electrolyte concentration cells- concentration cells with and without transference .

**SEMESTER V**  
**ORGANIC CHEMISTRY - PAPER – III**

L (hrs)	Credits
60	4

**Objectives**

- To study the Stereochemistry and aromatic substitution of organic molecules
- To learn about the Polynuclear hydrocarbons, Heterocyclic Compounds and Dyes

**UNIT-1 Stereochemistry**

**(12 hrs.)**

Stereoisomerism - definition - classification into optical and geometrical isomerism. Projection Formulae - Sawhorse and Newman projection formulae - Notation of Optical isomers - D-L notation- Cahn-Ingold-Prelog rules - R-S notations for optical isomers.

Optical isomerism - optical activity - optical and specific rotations - conditions for optical activity - asymmetric centre - chirality - achiral molecules. Elements of symmetry - Racemisation - methods of racemisation. Resolution - methods of resolution (mechanical, seeding, biochemical)

Geometrical isomerism - cis-trans and E-Z notations - Geometrical isomerism in maleic and fumaric acids and unsymmetrical ketoximes - Methods of distinguishing. Geometrical isomers using melting point, dipole moment, dehydration and cyclisation.

**UNIT-2 Aromatic substitution**

**(12 hrs.)**

General mechanism of electrophilic substitution, mechanism of halogenation, nitration, sulphonation. Orientation of aromatic substitution - Definition of ortho, para and meta directing groups. Direct influence of substituents - rules of orientation- Aromatic Nucleophilic substitutions- unimolecular, bimolecular and benzyne mechanisms- homolytic aromatic substitution (side chain halogenation of alkyl benzenes.).

**UNIT - 3 Polynuclear hydrocarbons**

**(12 hrs.)**

Isolated systems

Preparation of diphenyl, diphenyl methane, triphenyl methane and stilbene.

Condensed systems

Synthesis, reactions, structure and uses of naphthalene. Preparation and reactions of naphthols, naphthylamine and naphthaquinone.

Synthesis, Reactions, structure and uses of anthracene – Preparation and reactions of anthraquinone.

Synthesis and structure of alizarin.

Synthesis. reaction and structure of phenanthrene.

**UNIT- 4 Heterocyclic Compounds**

**(12 hrs.)**

Preparation, properties and uses of furan, pyrrole & thiophene - aromatic character. Synthesis and reactions of pyridine and piperidine - comparative study of basicity of pyrrole, pyridine and piperidine with amines.

Condensed five and six membered heterocyclics - preparation and reactions of indole, quinoline and isoquinoline - Fischer indole synthesis, Skraup synthesis and Bischer-Napieralski synthesis.

### **UNIT - 5 Dyes**

**(12 hrs.)**

Theory of colour and constitution – Witt's chromophore theory - resonance theory, valence bond theory and modern theory.

Dyes - requirements of a dye - Classification - according to structure and method of application.

Preparation, structure and uses of

- (i) Nitro dyes – Picric acid and Naphthol green
- (ii) Azo dyes - Methyl orange and Bismark brown
- (ii) Triphenyl methane dyes - Malachite green and Crystal violet
- (iii) Phthalein dyes - Phenolphthalein
- (iv) Vat dyes - Indigo
- (v) Anthraquinone dyes - Alizarin.

**SEMESTER V**  
**SKILL BASED CORE - I**  
**AGROCHEMISTRY**

<b>L (hrs)</b>	<b>Credits</b>
<b>60</b>	<b>4</b>

**Objectives**

1. To study detailed about fertilizers, pesticides, Insecticides, fungicide and herbicide
2. To learn about Soil characteristics and soil testing

**UNIT – I**

**(12 hrs.)**

Fertilizers : Classification, macronutrients -role of nitrogen, potassium and phosphorus on plant growth - manufacture of urea, muriate potash and triple superphosphate. Complex fertilizers, mixed fertilizers & biofertilizers - their composition. Micronutrients - their role in plants.

Manures : Bulky organic manures - Farm yard manure - oil cakes- blood meal - fish manures- Composting process - handling and storage

**UNIT – II**

**(12 hrs.)**

Pesticides – Definition- Classification of Pesticides based on the use and chemical composition - examples - general methods of application - Benefits of pesticides-Potential hazards. Safety measures -first aid.

Insecticides : Plant products – Nicotine, pyrethrin - Inorganic pesticides – borates. Organic pesticides - D.D.T. and BHC.

Fungicide : Sulphur compounds, Copper compounds, Bordeaux mixture.

Herbicides : Acaricides - Rodenticides. Attractants - Repellants.

**UNIT –III**

**(12 hrs.)**

Soil: Origin of soil- definition of soil-rock system-weathering of rocks and minerals-main components of soil-organic, inorganic constituents-soil formation – factors favouring soil formation.

**UNIT –IV**

**(12 hrs.)**

Characteristics of soil: Physical aspects-soil texture- pore space-bulk density, particle density-soil colour-surface area-soil colloids-plasticity, shrinkage-flocculation and deflocculation,soil air, soil temperature and their importance in plant growth.

Acid, alkaline and saline soils-diagnosis- Methods of reclamation and after care.

**UNIT –V**

**(12 hrs.)**

Soil testing: concept and objectives - soil sampling , tools, collection, processing, dispatch of soil sample.Estimation of total organic compound, available nitrogen and phosphorus in the soil sample.Determination of pH, EC, moisture content, bulk density and particle density of the soil sample.

**SEMESTER V**  
**SKILL BASED CORE - I**  
**FOOD CHEMISTRY**

L (hrs)	Credits
60	4

**Objectives:**

To acquire the basic knowledge of food chemistry

**Unit - I Constitution of food (12 hrs.)**

Food - definition - classification of food - energy requirements of individuals - source, classification and function of carbohydrates, proteins, lipids, vitamins and minerals - calorific values of food - rice, wheat, milk, fish, vegetables, fruits and cereals.

**Unit - II Food additives and preservatives (12 hrs.)**

Food additives: Definition - permitted food additives, characteristics and their role: antioxidants, stabilizers, flavours, sweeteners, emulsifiers, thickeners, food colourants.

Preservatives: Definition – methods of food preservation - heat, cold, deep-freezing, radiation.

**Unit - III Food adulterations (12 hrs.)**

Definition - adulterant, adulteration - types of adulterants - common adulterants and their determination in milk, oils, ghee, honey, chilly powder, coriander powder, turmeric powder, coffee powder, tea dust, asafoetida - food poisoning and its prevention – Prevention of Food Adulteration Act- food laboratories and their functions.

**Unit - IV Quality standards (12 hrs.)**

Quality control - specification and standards - FA, FDA, WHO standards - ISI specifications, packing and labeling of foods - Essential Commodities Act, Consumer Protection Act - AGMARK.

**Unit - V Estimation and analysis methods (12 hrs.)**

1. Determination of fat, protein and carbohydrate in food stuff.
2. Analysis of fats and oils - iodine value, acid value and RM value.
3. Estimation of glucose by Bertranel method
4. Analysis of starch in foods
5. Isolation of casein from milk

**SEMESTER – V**  
**ELECTIVE I - POLYMER CHEMISTRY**

L (hrs)	Credits
45	3

**Objectives:**

- To know the concept of polymerization and types of polymers
- To understand the characteristics of polymers
- To acquire knowledge about the polymerization techniques and polymer processing
- To know the chemistry of individual polymers
- To have an idea about the recent advances in polymer sciences

**Unit I Introduction to polymers**

**(9 hrs.)**

Definition - Monomer, polymer and polymerisation - classification of polymers.

(ii) Physical properties and applications - Rubbers, plastic, fibres

(iii) Thermal response - thermoplastics, thermosetting

(iv) Structure - Homopolymers, Copolymers

(v) Mode of formation - Addition, Condensation Polymerisation (definition and examples only)

(vi) Methods of polymerization - Bulk, Solution, Suspension Polymerisation (definition and examples only)

Chemistry of polymerization: Chain polymerization, free radical, ionic, co-ordination, step polymerization, polyaddition and polycondensation, miscellaneous ring opening and group transfer polymerizations.

**Unit II Characteristics of polymers**

**(9 hrs.)**

Glass transition temperature (T<sub>g</sub>) - definition – Factors affecting T<sub>g</sub> – relationships between T<sub>g</sub> and molecular weight and melting point. Number average, weight average (problems), sedimentation and viscosity average molecular weights - degree of polymerization, vulcanisation. Polymer degradation - basic idea of thermal, photo and oxidative degradation of polymers.

**Unit III Polymerization techniques and processing**

**(9 hrs.)**

Bulk, solution, suspension, emulsion, melt condensation and interfacial poly condensation polymerizations. polymer processing - calendaring - die-casting, rotational casting - compression moulding - injection moulding - blow moulding - extrusion moulding and reinforcing.

**Unit IV Chemistry of some commercial polymers**

**(9 hrs.)**

Thermoplastics, polyethylene, polypropylene, polystyrene, polyacrylonitrile, polyvinyl chloride, nylon, polyester.

Thermosetting plastics: Phenol formaldehyde resin, urea formaldehyde resin, melamine formaldehyde, epoxy resin, polycarbonate.

Elastomers: Natural rubber and synthetic rubber, Styrene and neoprene rubber.

## Unit V Advances in polymer

(9 hrs.)

Biopolymers - contact lens, dental polymers, artificial heart, kidney, skin and blood cells, Polymer industries in India.

**SEMESTER – V**  
**ELECTIVE I - INDUSTRIAL CHEMISTRY**

L (hrs)	Credits
45	3

**Objectives:**

- To gain knowledge about systems of units and conversion factor
- To understand utilities in chemical industries
- To know the severity of corrosion and methods of preventing it
- To study the industrial process of silicate industry
- To acquire the knowledge about the unit process

**UNIT I - Cement**

**(9 hrs.)**

Introduction-Cement manufacturing process, chemical composition of various types cement, chemical characteristics of cement raw materials and their phase relation, various unit operation of cement manufacture.

Hydration of clinker minerals, role of gypsum in cement hydration process, hydration of Portland and strength of Portland cement.

**UNIT II - Fuels and furnaces**

**(9 hrs.)**

Fuels - types of fuels - calorific values - ignition point - pyrometric effect - explosives range - Flue gas analysis by Orsat's method - explosives - classifications - low explosives - initiating explosives – high explosives - rocket propellants - nuclear fuels.

Furnaces - types of furnaces - Kilns - Blast furnace, reverberatory furnace - muffle furnace - electric furnace - regenerative furnace, open hearth furnace - Bessemer converter - vertical retort furnace.

**UNIT III- Corrosion and protective coating**

**(9 hrs.)**

Introduction - severity of corrosion - chemical and electrochemical corrosion - mechanism - factors influencing corrosion - control of corrosion - cathodic and anodic protection.

Paints - characteristics of paint - constituents of paints - pigments - vehicles - thinners -driers - fillers - plasticizers - anti skinning agents - their function and properties.

Metallic coating - removal of surface contamination - removal of superficial corrosion products - polishing - galvanizing - tinning - electroplating.

**UNIT IV- Silicate industry**

**(9 hrs.)**

Refractories - requirements of refractories - properties of refractories – solid refractories - fire clay refractories - magnesite refractories, dolomite bricks, graphite refractories, zirconia refractories, silicon carbide.

Abrasives - classifications – natural (diamond, corundum, emery, garnet, quartz and flint) and artificial (carborundum, alundum, boron carbide, metallic abrasives). Uses of abrasives - cement manufacture - setting and hardening of cements - gypsum - plaster of Paris - manufacture – setting and hardening - uses. White wares manufacture - types – glazing.

**UNIT V - Unit processes in organic manufacture**

**(9 hrs.)**

Sulphonation - uses and applications of sulphonates and sulphates - sulphonating agents - sulphur trioxide. Hydrolysis - hydrolyzing agents - mechanism of hydrolysis.

Oxidation - oxidizing agents - permanganate and dichromate – liquid phase oxidation - vapour phase oxidation - commercial manufacture of acetic acid. Hydrogenation - catalysts for hydrogenation - hydrogenation of vegetable oils.

**SEMESTER – V**  
**ELECTIVE II**  
**ANALYTICAL CHEMISTRY**

L (hrs)	Credits
45	3

**Objective :**

To know the importance of analytical chemistry and to study about the different types of analytical techniques

**UNIT I : ERRORS AND DATA ANALYSIS (9 hrs.)**

Definition and explanation with examples of the terms – mean, median, mode, range, deviation, mean deviation, relative mean deviation, standard deviation, coefficient of variation and variance – accuracy and precision – types of errors – random and systematic errors – methods of detection and elimination of systematic errors – student's t-test – confidence levels – Q-test for rejection of result – curve fitting – method of least squares – significant figures and computational rules.

**UNIT II : WATER ANALYSIS (9 hrs.)**

Sampling and preservation of water samples – physical examination of water : color, odour, turbidity, taste and electrical conductivity – chemical characterisation : pH, acidity, alkalinity, TDS, total, temporary, permanent, calcium and magnesium hardness, chloride, fluoride, BOD, COD, detergents and pesticides – residual chlorine and chlorine demand – Bacteriological examination : total and faecal coliforms.

**UNIT III : FUEL ANALYSIS (9 hrs.)**

Solid fuels : coal – classification – proximate analysis : moisture content, ash content, volatile matter and fixed carbon – ultimate analysis : carbon, hydrogen, nitrogen, sulphur and oxygen – heating values – grading of coal – comparison of coal and coke – liquid fuels : flash point, aniline point, octane number and carbon residues – gaseous fuels : producer gas and water gas – calorific values.

**UNIT IV : ELECTROANALYTICAL TECHNIQUES (9 hrs.)**

Electrogravimetry : principle, instrumentation and applications. Coulometry : constant current coulometry – coulometric titrations – applications – potentiostatic coulometry – Polarography : principle – experimental assembly – working – advantages and disadvantages of DME – applications to qualitative and quantitative analysis. Amperometric titrations : theory – apparatus – general procedures – applications – advantages

**UNIT V : SPECTROANALYTICAL AND THERMOANALYTICAL METHO (9 hrs.)**

Spectroanalytical methods : principle, instrumentation and applications of colorimetry, spectrophotometry and fluorimetry – light scattering techniques: nephelometry and turbidimetry.

**SEMESTER – V**  
**ELECTIVE II**  
**PHARMACEUTICAL CHEMISTRY**

L (hrs)	Credits
45	3

**Objectives**

- To understand the concepts and terminologies of pharmaceutical chemistry
- To know the mechanism of action and metabolism of drugs
- To study the functions of various drugs
- To know the important diseases and their treatment
- To study the common diseases and important disorders of human beings and the drugs used in the treatment.

**UNIT-I Important Terminologies, Classification and Assay (9 hrs.)**

Important terminologies - Pharmacology, Molecular pharmacology, Pharmacophore, metabolites, Antimetabolites, Pharmacokinetics, Pharmacodynamics, Bioavailability, Pharmacognosy, Pharmacotherapeutics, Toxicology, Chemotherapy – Classification of drugs – nomenclature of drugs – nonproprietary names – sources of drugs – assay of drugs (biological, chemical, immunological)

**UNIT-II Mechanisms, Metabolisms and Medicinal Plants (9 hrs.)**

Mechanism of drug action – absorption, drug delivery, drug excretion – Metabolism of drugs – chemical pathways of drug metabolism – phase – I (oxidative, reductive and hydrolytic reactions) and phase - II (conjugate reactions). Physiological effects of different functional groups in drugs – biological role of Na, K, Ca, Cu, Zn and iodine.

Indian medicinal plants – Phytoconstituents and their biological actions in Tulsi, neem, Keezhanelli, adathode, thoothuvalai

**UNIT- III Drugs and their actions (9 hrs.)**

Analgesics- narcotic analgesics- analgesic action, uses and structure activity of morphine. Non-narcotic analgesics – aspirin and paracetamol. Anaesthetics- local anesthetics – procaine- General anaesthetics- chloroform and halothane. Antibiotics – Therapeutically values of penicillin, tetracycline, chloramphenicol and streptomycin. Sulpha drugs – sulphanylde, sulphadiazine and cotrimoxazole. Antiseptics and disinfectants – phenols, chloramines and organicmercurials. Antidepressants – barbiturates – mechanism of action and uses. Antipsychotic drugs – piperazine and benzamides.

**UNIT-IV Diseases and treatment (9 hrs.)**

Composition of blood – blood grouping and matching – Rh factor. Anaemia – causes and control – antianemic drugs. Blood pressure – causes, control and treatment- antihypertension drugs, antianginal agents - cardiovascular drugs, cardiac glycosides, vasodilators (one example for each). Diabetes – causes and control – hypoglycemic drugs – insulin – oral hypoglycemic drugs (tolubutamide and chlorpropamide). Cancer- causes and treatment – cobalt therapy - antineoplastic drugs (chlorambucil, methotrexate, plant products and hormones).

**UNIT- V Common disorders and health care medicines (9 hrs.)**

Common diseases – causes and treatment of insect borne diseases (Malaria and Filariasis), airborne diseases (Diphtheria, Whooping cough, Influenza, common cold, TB) and Water borne diseases (Cholera, Typhoid and Dysentery). Digestive disorder –

Jaundice. Respiratory disorder – Asthma. Nervous system disorder – epilepsy. Other diseases – Leprosy. Health care medicines – Sources and deficiency diseases of Vitamins A, B complex, C, D, E and K.

## **SEMESTER V**

Skill Based Subject (1 Course)

Effective Communication / Personality Development

**SEMESTER V**  
**PHYSICAL CHEMISTRY PRACTICAL – I**

<b>L (hrs)</b>	<b>Credits</b>
<b>60</b>	<b>2</b>

**Objective**

- To provide training in the identification of physical properties like molar mass, molecular weight and solubility of some chemical compounds
  - To provide training in Freundlich isotherm and phase equilibrium of the chemical reaction
  - To provide training in the estimation of compounds using conductometric and potentiometric methods
1. Determination of molar mass of the given substance by Rast micro/macro method
  2. Determination of molecular weight of the given substance by Transition temperature method
  3. Determination of solubility of a substance at different temperatures and calculation of heat of solution
  4. Study of adsorption of oxalic acid on charcoal and verification of Freundlich isotherm
  5. Study of phase equilibrium – Simple eutectic
  6. Estimation of HCl by conductometric method using standard oxalic acid (to be prepared) and link NaOH
  7. Estimation of Fe(II) by potentiometric method using standard ferrous ammonium sulphate (to be prepared) and link  $\text{KMnO}_4$ .

**SEMESTER – VI**  
**INORGANIC CHEMISTRY - PAPER IV**

L (hrs)	Credits
60	4

**Objectives**

- To study detailed about ceramics, carbon fibers, zeolites, metal oxide pigments
- To know about elemental silicon and silicones and inorganic polymers

**Unit I Ceramics**

**(12 hrs.)**

Ceramics – classification, optical waveguides (optical fiber), sol-gel formation for low temperature ceramic formation. Non-oxide ceramics – general aspects, silicon carbide, silicon nitride and boron nitride ceramics. Fabrication of ceramic materials and its challenges. Textile glass fiber (E-glass fiber) and optical fiber manufacture, fabrication and applications.

**Unit II Carbon and other non-metal and metal fibers & zeolites**

**(12 hrs.)**

Carbon fibers: introduction, manufacture, applications and economic importance. SiC-coated carbon fibers. Aluminium oxide, boron and metal fibers; their manufacture and applications.

**Unit III Zeolites**

**(12 hrs)**

Natural and synthetic zeolites –  $\text{AlPO}_4$ ,  $\text{AlSiO}_4$  and  $\text{SiO}_4$ , manufacture of synthetic zeolites from different sources, pelletization, dehydration and applications.

**Unit IV Metal oxide pigments**

**(12 hrs.)**

Inorganic pigments: white pigments:  $\text{TiO}_2$  pigment, its manufacture, post-treatment and applications; ZnO white, lithopone and ZnS pigments. Coloured pigments: iron oxide pigments – manufacture, oxidation processes and applications;  $\text{Cr}_2\text{O}_3$ , chromate, molybdate and ferrocyanide pigments; lustrous, luminescent, magnetic and corrosion protection pigments.

**Unit V Elemental Silicon & silicones**

**(12 hrs.)**

Silicon: metallurgical grade, ferrosilicon and electronic grade silicon, manufacture and applications.

Silicones & poly(organo siloxanes) (POS): manufacture, linear and branched POS, high molecular weight POS; silicone oil, emulsion, rubbers and resins.

**SEMESTER VI**  
**PHYSICAL CHEMISTRY PAPER IV**

L (hrs)	Credits
60	4

**Objectives**

- To study about the principles in photochemistry
- To understand the principles in advanced spectroscopy
- To study the principles of group theory as applied to simple molecules
- To know the importance of nanochemistry

**Unit - I Nanochemistry (12 hrs.)**

Definition - size dependent properties: magnetic, electrical and optical properties – quantum dots – metal oxides and metal nano particles - ceramic nano particles

Synthesis of nanomaterials - bottom-up and top-down approaches - thin film deposition - catalytic assisted growth - chemical vapour deposition - sol gel method - chemical reduction

Fullerenes - carbon nanotubes - single walled and multi walled nano tubes – structures - carbon nanofibre – nanocomposites. Applications of nanoscience and nanotechnology.

**Unit - II (12 hrs.)**

Introduction - various types of molecular spectra - electronic, vibrational and rotational energy levels - Born-Oppenheimer approximation.

Rotation spectra of diatomic molecules - determination of bond length and moment of inertia from rotational spectra - numerical problems - selection rule, effect of isotopic substitution.

UV-visible spectroscopy: theory - types of transitions in molecules - selection rules for electronic spectra - factors affecting absorption maximum and intensity – applications.

**Unit - III (12 hrs.)**

IR spectroscopy : theory - stretching and bending vibrations - factors affecting vibrational frequencies - important spectral regions for the characterization of functional groups - finger print region - determination of force constant - qualitative relation of force constant to bond energies - selection rules - modes of vibrations in polyatomic molecules - vibrational modes of H<sub>2</sub>O and CO<sub>2</sub> – applications - numerical problems.

**Unit - IV (12 hrs.)**

Raman spectroscopy: Principle - Rayleigh and Raman scattering - Stokes and Anti-stokes lines - differences between IR and Raman spectroscopy - mutual exclusion principle – selection rule - applications.

NMR spectroscopy: Theory of NMR, modes of nuclear spin-relaxation process - shielding effect, hyperfine splitting, coupling constants, - chemical shift - factors affecting chemical shift - internal standard,  $\delta$  and  $\tau$  scale - applications of NMR and limitations of NMR.

**Unit - V (12 hrs)**

ESR spectroscopy: principle - energy level splitting - presentation of ESR spectrum for methyl and benzene radicals, deuterium - applications

Mass spectroscopy: basic principles of mass spectrum - molecular peak - base peak - isotopic peak - meta stable peak - types of fragmentation - factors influencing the fragmentation - Mc-Lefferty rearrangement - applications

10. Jag Mohan Organic Spectroscopy

**Semester-VI**  
**ORGANIC CHEMISTRY –PAPER IV**

L (hrs)	Credits
60	4

**Objectives**

- To study the structure and functions of aldohexoses and ketohexoses.
- To learn the chemistry of carbonyl, hydroxy and carboxyl functional groups in aromatic environment
- To learn and practice the molecular rearrangements and the reaction mechanisms and the role of reagents in organic chemistry
- To learn the basic aspects of alkaloids and terpenoids
- To learn the basics of organic spectroscopy

**UNIT-I Carbohydrates**

**(12 hrs.)**

Classification-Monosaccharides- constitution of glucose and fructose. Reactions of glucose and fructose – Osazone formation, Mutarotation and its mechanism, cyclic structure, pyranose and furanose forms. Epimerisation-Chain lengthening and shortening of aldoses. Interconversions of aldoses and ketoses.

Disaccharides- reactions and structure.

Polysaccharides – starch and cellulose ( elucidation of structure not necessary).

**UNIT-II Phenols, Aromatic Aldehydes, Ketones**

**(12 hrs.)**

**Phenols**

Acidic character of phenols- effect of substituents on acidity of phenols - Mechanisms of Kolbe's reaction and Reimer-Tiemann reaction. Preparation of cresols, catechol, resorcinol, quinol and eugenol.

**Aldehydes and ketones**

Preparation and uses of cinnamaldehyde. Coumarin, vanillin, Michler's ketone, p-benzoquinone-Quinone mono oxime tautomerism. Mechanism of Cannizzaro reaction, benzoin condensation, Perkin reaction, Claisen reaction, Knoevenagel reaction, Gattermann aldehyde synthesis and Houben –Hoesch synthesis.

**UNIT-III Molecular Rearrangements, Reagents and Aromatic acids**

**(12 hrs.)**

Ortho effect, preparation of mandelic acid, cinnamic acid and anthranilic acid. Preparation and uses of benzene-1,2- dicarboxylic acid, benzene - 1,3- dicarboxylic acid and 1,4- dicarboxylic acid.

Classification as anionotropic, cationotropic, intermolecular and intramolecular.

Mechanisms of pinacol-pinacolone, Beckmann, benzidine, Hofmann, Curtius, Schmidt, benzilic acid, Fries and Cope rearrangements.

**UNIT-IV Reagents**

**(12 hrs.)**

Important reagents and their applications in organic chemistry –  $\text{AlCl}_3$ ,  $\text{BF}_3$ ,  $\text{LiAlH}_4$ ,  $\text{NaBH}_4$ ,  $\text{PCl}_5$ ,  $\text{P}_2\text{O}_5$ , Na/ethanol, alcoholic KOH,  $\text{H}_2/\text{Ni}$ ,  $\text{H}_2/\text{Pd-BaSO}_4$ ,  $\text{Zn/Hg-HCl}$ ,  $\text{H}_2\text{N-NH}_2/\text{C}_2\text{H}_5\text{ONa}$ ,  $\text{Ag}_2\text{O}$ ,  $\text{HIO}_4$ , Lead tetra acetate and Osmium tetroxide, Pd/C & Raney Ni as catalyst for  $\text{NO}_2$  ester or acid reduction using Borohydride reagents.

**UNIT-V Alkaloids and Terpenoids**

**(12 hrs.)**

Alkaloids – classification – isolation – general methods of determination of structure of alkaloids-synthesis of coniine, piperine and nicotine.

Terpenes- definition,classification – isolation- isoprene rule-synthesis of citral, geraniol, menthol and dipentene.

**SEMESTER- VI**  
**ELECTIVE – III**  
**BIOCHEMISTRY**

L (hrs)	Credits
45	3

**Objectives :**

- To enable the student to develop a sound knowledge of fundamental concepts in biochemistry.
- To enumerate the molecular motif of a living cell, structural and functional hierarchy of biomolecules.
- To emphasis on the various aspects of metabolism and interrelationship of metabolic events.

**UNIT 1: Amino Acids and Proteins** **(9 hrs.)**

**Amino acids** – classification – Synthesis of amino acids and their identification. Peptide bond- stereochemistry, synthesis of peptides by solution and solid phase techniques.

**Proteins** – classification – properties-3D structure-determination of amino acid sequence –denaturation and renaturation of protein molecules.

Separation and purification of proteins – dialysis – gel filtration - electrophoresis.

Catabolism of amino acids: Transamination, oxidative deamination, decarboxylation. Theurea cycle and other possibilities of detoxification of ammonia.

**UNIT 2 :Enzymes** **(9 hrs.)**

Nomenclature, classification and properties-specificity, factors influencing enzyme action. Mechanism of enzyme action – Lock and Key model and induced fit models. Coenzymes – cofactors – prosthetic groups of enzymes (TPP, NAD, NADP, FAD, ATP). Their importance in enzyme action. Mechanism of inhibition (competitive, non- and uncompetitive and allosteric). Immobilization of enzymes. Enzyme specificity, Kinetics of mono and disubstrate enzyme catalyzed reactions. Serum enzymes and isoenzymes-their diagnostic value.

**UNIT 3: Lipids** **(9 hrs.)**

Classification - neutral lipids, Phospho lipids (lecithines, cephalins, plasmalogens) and glycolipids – importance, synthesis and degradation. Fatty acids – saturated, unsaturated fatty acids, EFA. Properties – Hydrolysis-acid number, saponification number. Auto-oxidation (Rancidity), addition reactions-Iodine value, Polenske number, Reichert-Meissl number, acetyl number. Hydrogenation. Cholesterol – biosynthesis. Bile salts derived from cholesterol.

**UNIT 4: Carbohydrates** **(9 hrs.)**

Metabolism: Glycolysis and its reversal; TCA cycle. Relation between glycolysis and respiration. Principles of bioenergetics, electron transport chain and oxidative phosphorylation. Gluconeogenesis, pentose phosphate pathway.

**Unit 5: Nucleic acids** **(9 hrs.)**

Nucleosides and nucleotides – purine and pyrimidine bases. Nucleic acids Difference between DNA and RNA. Classification of RNA. Biosynthesis of DNA: Replication. Biosynthesis of mRNA: Transcription. Genetic code – mutations and mutants. DNA

repair. Biosynthesis of proteins. DNA sequencing and PCR, recombinant DNA technology, DNA polymorphism.

**SEMESTER – VI  
ELECTIVE - III  
APPLIED CHEMISTRY**

L (hrs)	Credits
45	3

**Objectives**

- To study the importance of water purification
- To understand the importance of lubricants
- To know about the mineral wealth and its importance
- To know the applications of leather technology
- To study the various types of environmental pollution

**Unit I : Water Technology**

**(9 hrs.)**

Sources of water: hardness – classification - units and estimation. Water for industries – boiler feed water and its treatment – external conditioning : lime soda, permutit and ion exchange processes – internal conditioning : carbonate, phosphate, calgon and colloidal treatments – Boiler corrosion. Water for domestic purposes – requirements – purification : sedimentation – coagulation – filtration – disinfection : ozonisation – chlorination – break point chlorination . Sea water as a source of drinking water : reverse osmosis and electrodialysis – removal of taste and colour - fluoridation .

**Unit II Petroleum Refineries**

**(9 hrs.)**

Petroleum refining- Types of crudes, composition and its characteristics - distillation- cracking-reforming- hydrotreating-Alkylation and isomerization- dehydrogenation-nitration- chlorination- sulphonation.

**Unit III : Lubricating Oils, Greases and Emulsions**

**(9 hrs.)**

Lubricating oils – classification – mechanism of lubrication : viscosity index, cloud point, flash point, fire point, aniline point, neutralization number, saponification number, iodine value, specific gravity and their determination. Greases : classification – consistency or mechanical stability – penetration number, dropping point and their determination. Emulsions : water emulsion test – steam emulsion number.

**Unit IV : Leather Chemistry**

**(9 hrs.)**

Introduction – constituents of animal skin – preparing skins and hides : cleaning and soaking – liming and degreasing – fleshing - shaving – leather tanning : vegetable tanning and chrome or mineral tanning – dyeing and fat liquoring – leather finishing. Leather industries in India – leather products and their uses – Tannery effluents – methods of treatment – primary, secondary and tertiary treatments – waste management – pollution prevention.

**Unit V : Environmental Pollution and its Control**

**(9 hrs.)**

Structure and composition of atmosphere – pollutants – classification – air pollutants and their effects – green house effect and global warming, ozone depletion, photochemical smog and acid rain – removal of particulates and gaseous pollutants – methods and equipments. Water pollutants – classification – effects of water pollution – treatment of domestic wastes and industrial effluents . Soil pollution – sources, causes and control.

**SEMESTER – VI**  
**SKILL BASED CORE - II**  
**CHROMATOGRAPHY**

L (hrs)	Credits
<b>60</b>	<b>4</b>

**Objective**

- To understand the principle behind various types of chromatographic techniques and their applications

**UNIT 1 Paper Chromatography (12 hrs.)**

Introduction, Classification of chromatography methods.

Paper Chromatography: Principles, significance of  $R_f$  values. Experimental procedures, choice of paper and solvent systems, developments of chromatogram. Detection of the spots. Ascending, descending and radial Paper Chromatography Two-dimensional chromatography. Applications.

**UNIT 2 Thin Layer Chromatography (12 hrs.)**

Thin Layer Chromatography: Advantages of thin layer chromatography – principles, factors affecting  $R_f$  values. Experimental procedures. Choice of adsorbents and solvents. Preparation of plates. Development of the chromatogram. Detection of the spots. Applications.

**UNIT 3 Column Chromatography (12 hrs.)**

Column Chromatography – Principles, experimental procedures, stationary and mobile phases, Choice of solvent systems. Separation technique. Applications.

**UNIT 4 Ion Exchange Chromatography (12 hrs.)**

Principle, ion exchange resins & their types- cation exchange resins, anion exchange resins, ion exchange reactions, ion exchange equilibria properties of ion exchange resins, ion exchange capacity and applications.

**UNIT 5 Gas Chromatography (12 hrs.)**

Principle, instrumentation, choice of injectors, column and detectors – Programmed temperature chromatography, flow programming chromatography, gas-solid chromatography and hyphenated techniques in chromatography – Applications of Gas Chromatography.

**SEMESTER— VI**  
**SKILL BASED CORE - II**  
**DAIRY CHEMISTRY**

L (hrs)	Credits
<b>60</b>	<b>4</b>

**Objectives:**

- To learn the composition and properties of milk
- To understand the chemical composition of milk and milk processing.
- To know the chemistry of cream and butter
- To study to fermented milk products
- To know the condensed milk and dairy detergents

**UNIT-I Properties of milk** **(12 hrs.)**

Definition, Composition, Milk lipids, Milk proteins, vitamins and minerals. Factors affecting the composition of milk - adulterants, preservatives, and neutralizer - examples and their detection.

**UNIT-II Processing of milk** **(12 hrs.)**

Destruction of microorganisms in milk – physicochemical changes during processing – boiling, pasteurization – pasteurization types – bottle pasteurization –batch pasteurization – HTST (High Temperature Short Time) – vacuum pasteurization –(UHT) Ultra High Temperature Pasteurisation.

**UNIT-III Milk products-I** **(12 hrs.)**

Milk Products: Cream – definition, classification – manufacturing – chemistry of creaming process –physical-chemical properties – separation of cream , estimation of fat in cream , Butter – definition, classification, composition, theory of churning, desibutter, salted butter. Ghee –major constituents, common adulterants and their detection.

**UNIT-IV Milk products-II** **(12 hrs.)**

Fermented milk products - fermentation of milk - definition and conditions. Ice creams - definition, composition, types, manufacture of ice - cream, stabilizers, emulsifiers, and their role, milk powder – definition, process of making milk powder.

**UNIT –V Condensed milk and dairy detergents** **(12 hrs.)**

Condensed milk – definition, classification and differences between condensed milk and skim – condensed milk – sanitation – pasteurization – nutritive value of milk – difference between cow milk and bauffalo milk- milk enzymes. Dairy Detergents : Definition-characteristics – classification-washing procedure (modern method) sterilization – chloramine -T and hypochlorite solution.

**SEMESTER- VI**  
**PHYSICAL CHEMISTRY PRACTICAL – II**

<b>L (hrs)</b>	<b>Credits</b>
<b>60</b>	<b>2</b>

**Objectives**

- To provide training in comparison of strength of acids
  - To provide training in the determination of critical solution temperature and strength
  - To provide training in the determination of viscosity
  - To provide training in potentiometric and conductometric methods in estimation of some compounds
  - To provide training in determination of equivalent conductance and calculation of dissociation constant
- 
1. Comparison of the strengths of acids by studying the kinetics of ester hydrolysis
  2. Determination of CST of phenol-water system. Study of the effect of impurity on CST and determination of the strength of unknown
  3. Determination of the viscosity using Oswald viscometer.
  4. Estimation of  $\text{MgSO}_4$  by conductometric method using standard  $\text{MgSO}_4$  (to be prepared) and link  $\text{BaCl}_2$
  5. Estimation of  $\text{K}_2\text{Cr}_2\text{O}_7$  by potentiometric method using standard  $\text{K}_2\text{Cr}_2\text{O}_7$  (to be prepared) and link  $\text{KMnO}_4$
  6. Determination of equivalent conductance of weak electrolyte and calculation of dissociation constant

**SEMESTER III**  
**CHEMISTRY Allied Paper – I**

L (hrs)	Credits
45	3

**Objective**

- To study the nature of inert gases and their compounds
- To learn the chemistry of basic heterocyclic compounds.
- To study about photochemical reactions
- To learn about the importance of polymers and polymer science.
- To study about lubricants and some cosmetics in the modern world.

**Unit I – Inorganic chemistry - Zero group elements (9 hrs.)**

Isolation of inert gases by physical and chemical methods - preparation and properties of xenon tetra fluoride, xenon hexafluoride xenon oxytetrafluoride - uses of noble gases – clathrates and their uses.

**Unit II - Organic chemistry – Principles of reactions (9 hrs.)**

Heterolytic and homolytic cleavage - nucleophiles and electrophiles - reaction intermediates – preparation and properties of carbonium ions, carbanions and free radicals - type of reactions - substitution, addition, elimination and polymerisation reactions.

**Unit III - Physical chemistry - Photochemistry (9 hrs.)**

Definition - comparison between thermal and photochemical reactions - Laws of photochemistry-Beer Lambert's law-Grothus Draper law-Einstein's law-Quantum yield-low and high quantum yields - determination of quantum yield-fluorescence, phosphorescence, thermoluminescence, chemiluminescence and bioluminescence-definition with examples-photosensitisation

**Unit IV - Polymer Chemistry (9 hrs.)**

Definition - Monomers, Oligomers, Polymers - Classification of polymers-: Natural synthetic, linear, cross linked and network- plastics, elastomers, fibres, Homopolymers and Co-polymers

Thermoplastics- Polyethylene, Polypropylene, polystyrene, Polyacrylonitrile, Poly vinyl Chloride, nylon and polyester - Thermosetting plastics -: Phenol formaldehyde and epoxide resin-Elastomers- Natural rubber and synthetic rubber - Buna - N, Buna-S and neoprene.

**Unit V-Applied Chemistry (9 hrs.)**

Lubricants – classification-criteria of good lubricating oils-synthetic lubricating oils-poly glycols and poly alkene oxides-greases or semi solid lubricants – examples-solid lubricants-graphite.

Preparation and uses of shampoo, nail polish, sun screens, tooth powder, tooth paste, boot polish, moth ball, chalk piece.

**SEMESTER III**  
**Allied Practicals - I**  
**Quantitative Analysis**

L (hrs)	Credits
60	2

**Objectives**

To provide training in basic volumetric titrations like acidimetry, alkalimetry, permanganometry, iodometry, dichrometry and complexometry.

**Acidimetry and alkalimetry**

1. Estimation of oxalic acid – Std oxalic acid
2. Estimation of  $\text{Na}_2\text{CO}_3$  – Std  $\text{Na}_2\text{CO}_3$

**Permanganometry**

3. Estimation of ferrous ammonium sulphate – Std ferrous ammonium sulphate

**Iodometry**

4. Estimation of  $\text{K}_2\text{Cr}_2\text{O}_7$  – Std  $\text{K}_2\text{Cr}_2\text{O}_7$

**Dichrometry**

5. Estimation of ferrous iron – Std ferrous ammonium sulphate

**Complexometry**

6. Estimation of Zn – Std  $\text{ZnSO}_4$
7. Estimation of Mg – Std  $\text{ZnSO}_4$

**SEMESTER IV**  
**CHEMISTRY**  
Allied Paper – II

L (hrs)	Credits
45	3

**Objective**

- To study about the properties of transition and inner transition elements
- To learn the chemistry of basic aromatic compounds.
- To understand the nuclear particles and few nuclear reactions
- To know about carbohydrates, amino acids, proteins and nucleic acid.
- To know about some common diseases and the drugs used.

**UNIT 1: Inorganic Chemistry** **(9 hrs.)**

**Transition and Inner Transition elements**

a) Transition Elements:

Transition metals - general characteristics - metallic character - oxidation states - size - density - melting and boiling points - ionization energy - colour - magnetic properties - reducing properties - catalytic properties. b) Inner Transition elements Lanthanides - Electronic configuration and general characteristics - occurrence of lanthanides - separation by ion exchange method - lanthanide contraction. Actinides - Electronic configuration and general characteristics - comparison with lanthanides.

**UNIT 2: Organic Chemistry** **(9 hrs.)**

**Aromatic compounds**

General characteristics of aromatic compounds - aromaticity - Huckel's rule with examples- non - benzenoid aromatic compounds (definition and examples only) Preparation, properties and structure of benzene, naphthalene and anthracene.

**UNIT 3: Physical Chemistry** **(9 hrs.)**

**Nuclear chemistry**

Nuclear stability - n/p ratio - packing fraction - mass defect - binding energy - isotopes, isobars, isotones with examples. Separation of isotopes by diffusion method - group displacement law - radioactive series - Nuclear fission, fusion - Application of radio isotopes (radio diagnosis and therapy, C<sup>14</sup> dating).

**UNIT 4: Biochemistry** **(9 hrs.)**

Carbohydrates - definition and classification - artificial synthetic sweeteners. Amino acids - classification - amphoteric nature - isoelectric point. Proteins - classification according to composition, solubility and shape - colour reactions - biological action. Nucleic acids - purines, pyrimidines, nucleocides, nucleotides - DNA - structure of DNA - RNA - different types of RNA

**UNIT-5: Pharmaceutical Chemistry** **(9 hrs.)**

Common diseases - infective diseases - insect borne - air borne - water borne - hereditary diseases. Definition and examples of analgesics, antipyretics, sulpha drugs, antimalarials and, antibiotics. Diabetes - causes - hyper and hypoglycemic drugs. Indian medicinal plants - tulsi, neem, keezhanelli- their importance.

**Allied Practicals - II**  
**Organic Analysis Qualitative**

L (hrs)	Credits
<b>60</b>	<b>2</b>

**Objective**

To provide training in qualitative analysis of organic compounds like identification of functional groups, test for saturation and unsaturation and detection of elements, particularly nitrogen.

1. Detection of N
2. Test for aliphatic and aromatic nature of substances.
3. Test for saturation and unsaturation.
4. Identification of functional groups
  - i) Carboxylic acid
  - ii) Phenols
  - iii) Aldehydes
  - iv) Ketones
  - v) Carbohydrates
  - vi) Primary amines
  - vii) Amides
